

ANDROID

PROJECT 1

Create an Android application using Android Studio and the Kotlin programming language with the following requirements:

1. Has at least 2 Activities
2. Has at least 2 Intents (one must be a return intent)
3. Bundle at least 1 piece of data in EACH intent (using *putExtra*)
4. Implement *onActivityResult* and use *RESULT_OK* or *RESULT_CANCEL*
5. Has a Kotlin Object (uses the Kotlin object keyword)
6. Has an array of some kind (hash, list, array, etc) inside the Kotlin Object

Meeting all requirements will yield a base score of 80%. Add additional features, design and other enhancements (or just be creative) for the additional 20%. You might make a trial app, or a flash card app. You might use this project as a stepping stone for your final project.

Requirements:

All submissions must be committed to your git repository and shared with BSUMobileDev with email MichaelZiray@BoiseState.edu Projects should compile, run and have all assets required for proper grading.
