HOMEWORK 3

Decide on your final project idea.

Apps tend to center around a service to users, whether that's showing data, calculating data, or allowing some administration of data.

If you need an idea, look up places that have free-to-use APIs that you can pull data from. Some ski resorts provide this for snow reports, Coin Desk allows you to pull Bitcoin and other currency data, and certain game stat websites allow you to pull player stats from them (League of Legends, Dota, PUBG, etc).

For your app idea, complete the following items:
1. Elevator pitch of your app idea (1-2 paragraphs, first sentence should be your hook). Avoid cliches like, "Facebook for pets!" or "Amazon but with Snapchat"
2. App title (less than 50 characters).
3. App description (about two paragraphs, can have bulleted feature list).
4. App sketches (*at least* 3 screens). Hand drawn are ok.
5. Keywords (around 100 characters).
6. Category of your app.

Submissions need to be in PDF.
